Bluetens

Bluetens

Bluetens your connected well-being

Bluetens is the first connected electrostimulator.

Developed by a French team, Bluetens is **medically certified** and helps you feel better.

Bluetens generates an electric current that, depending on frequency, intensity and duration, will **treat** you, **relax** you or **fortify** you in total freedom.

Whether you need a natural pain killer, relaxation after a rough day, an active recovery solution, or fortification, **Bluetens is the solution for you.**

Electrotherapy, how does it work ?

The electric stimulation created by Bluetens is identical to a natural process controlled by the brain, for generating muscular contractions that provide treatment, relaxation or strengthening.

Electro-stimulation is a training technique integral to the preparation of athletes, especially for their recovery.

It is taught during physiotherapy studies and used extensively by practitioners. It is integrated in protocols for numerous pain killers and it is an extremely efficient natural solution to relieve pain.

Bluetens

Your well-being
companion with you,
EVERYWHERE you go

15 BODY AREAS

more than

150 PROGRAMS

3 ACTIONS :

[cure, relax, tone]

5 EFFECTS :

[friction, kneading,
pressure, pummeling,
contraction]

The 5 effects and sensations

PUMMELING

Brings you a real pummeling sensation, warming up muscles, while preparing them for exercise. You will have the feeling of a physiotherapist hitting your muscles with the edges of his hands.

PRESSURE

This effect is the most used by physiotherapists during massage. A pacifying and relaxing sensation when the therapist's hand glides over the skin. At low intensity, the sensation will be felt on the skin; at high intensity, you will feel muscular tensions disappearing.

KNEADING

This mode kneads and deeply relaxes your muscles. A soothing massage, improvement of blood circulation, cleaning of metabolites, we use this effect to relax your muscles and promptly relieve tension.

CONTRACTION

You will feel your muscle contract and relax, it is a good sign. You are currently working out, this is how Bluetens helps strengthen you by toning your muscles. This action is often followed by a pummeling effect to prepare your muscles for next effort.

FRICTION

You will feel a diffuse effect, similar to warming, a mild and pleasant caress. We use such effect in order to relieve your pain. It's a natural solution to efficiently cut the transmission of pain message to the brain.
